5 EASY STEPS TO
Washing
Your Car

SUPERCHEAP
AUTO
everything auto & ^{Much}more

#1

Drain The Cooling System

Hose down the car using a good strong jet to remove the sticky rode grime from the duco and wheel arches.

#2

Flush The System

Rewet the car from the top down. Remember to keep re-wetting the car as you work as this will prevent water stains as the car dries.

#3

Check & Replace Worn Hoses

Pour the correct amount of car wash into a bucket or into the washer attachment.

#4

Fit A New Thermostat

Apply the car wash liberally over the paintwork working from the roof down. If using a sponge or wash mitt be certain to rinse them regularly and don't be afraid to wash the car a couple of times if it is very dirty to ensure that no grit is worked into the duco. Never scrub a dirty car too hard as it can result in swirl marks to the duco. It may go without saying for many but NEVER use an abrasive scouring pad to clean your car! Also it can be good practice to use 2 sponges or mitts when washing your car, using one for the painted areas of the car and the other for tires, bumpers, wheels and mud flaps.

#5

Refil The System

Once the car has been washed, wipe the car down using either a synthetic or genuine leather chamois.
